

Antonio J. Redondo Mendoza

Lead Software Engineer / Technical Lead

Washington, DC · (202) 751-9617 · antonioredondomendoza@gmail.com · linkedin.com/in/ajredondo · github.com/Antonio-Redondo

PROFESSIONAL SUMMARY

Hands-on engineering leader with **18+ years** of **Java** and cloud experience. Technical lead at a Tier-1 financial enterprise in the US, running architecture and delivery across four teams (**20+ engineers**) while staying close to the code — **Spring Boot microservices, AWS, Kubernetes, and event-driven systems** are daily ground for me. Over the past two years I've embedded **AI** deeply into the team's day-to-day SDLC: spec-driven development with AI-augmented coding, agent orchestration (**LangGraph**), and automated LLM evaluation — contributing to a **35% increase in sprint throughput**. Started my career in Málaga at Indra and have led teams across Spain, the UAE, and the US. **AWS Solutions Architect Professional, Security Specialty, and Machine Learning Specialty** certified.

CORE COMPETENCIES

Backend & Architecture: Java, Spring Boot, microservices, REST APIs, event-driven architecture, message queues, high-availability data platforms, SLI/SLO ownership, secure-by-design

Cloud & DevOps: AWS (EKS, ECS, EC2, Lambda, S3, RDS, IAM, Bedrock, SageMaker), Kubernetes, Docker, Terraform, GitHub Actions, CI/CD, deployment automation

AI in the SDLC: Daily use of AI-augmented engineering tools in coding, review, and testing workflows. Spec-driven development with AI delivery, LangGraph agent orchestration, RAG with vector databases, AWS Bedrock and SageMaker, LLM-as-judge evaluation, LangSmith observability, AI guardrails

Technical Leadership: Hands-on tech leadership across multiple teams, quarterly technical roadmap ownership, Team Topologies principles (stream-aligned, platform, enabling), flow and cognitive-load management, mentorship of senior engineers, code and architecture reviews, Agile/Scrum

Reliability & Governance: Observability tooling, MTTR/uptime ownership, release governance, audit-ready delivery in regulated environments

PROFESSIONAL EXPERIENCE

Technical Lead — Fannie Mae, Washington, DC

Sep 2019 – Jun 2026

- Hands-on Java/Spring Boot technical lead across four cross-functional engineering teams (20+ engineers). Own the technical lifecycle each quarter — architecture decisions, code reviews, delivery flow, and unblocking the senior ICs.
- Architect and ship Java/Spring Boot microservices on AWS (EKS, ECS, RDS, S3, Lambda, SQS) powering mortgage origination, servicing, and risk workflows in a Tier-1 regulated environment.
- Embedded AI deeply into the team's daily SDLC: spec-driven development with AI-augmented coding, agent-assisted code review, automated evaluation pipelines. Contributed to a 35% increase in sprint throughput while keeping output reviewable, traceable, and audit-ready.
- Built production GenAI capabilities — LangGraph orchestration, RAG with hybrid search and vector databases, AWS Bedrock and SageMaker — plus the guardrails framework that allowed LLM features to ship safely in a regulated platform.
- Designed enterprise observability across 50+ systems. Reduced MTTR by 40%, tripled deployment frequency, sustained 99.95% uptime.
- Drove CI/CD and deployment automation across the group: GitHub Actions pipelines, Terraform-managed infrastructure, release governance built for a heavily audited environment.
- Mentor 20+ engineers including team leads and senior ICs through code reviews, architecture reviews, and guild-style forums.

Solution Architect / Team Lead — Freddie Mac, McLean, VA

Sep 2018 – Sep 2019

- Led migration of 20+ legacy Java/Spring services to a containerized OpenShift (Kubernetes) platform on AWS, improving deployment consistency, rollback safety, and horizontal scalability.
- Established release governance and deployment automation across AWS-hosted environments. Eliminated 30% of manual operational work and improved release predictability across teams.
- Hands-on across the Java codebase and AWS infrastructure. Partnered with engineering and product stakeholders to align the technical roadmap with business priorities.

Senior Java Engineer — Consol MENA Ltd, Dubai, UAE

Apr 2017 – Dec 2017

- Hands-on Java/Spring backend engineering and third-party integrations on AWS for regional enterprise clients. Raised code-review standards and mentored engineers to accelerate delivery velocity.

Senior Software Engineer — Emirates Airlines, Dubai, UAE

Nov 2015 – Apr 2017

- Led an 8-engineer team owning Java/Spring platform reliability and evolution for high-traffic customer-facing systems on AWS, serving tens of millions of users worldwide.
- Hands-on across the Java codebase and AWS infrastructure. Improved release velocity and application reliability through automation, stronger testing frameworks, and refined release workflows.

Software Engineer — Indra Software Labs, Málaga, Spain

Apr 2008 – Oct 2015

- Hands-on Java/Spring backend engineer: designed systems, APIs, and integrations for top-tier clients across financial services, telecommunications, and public sector — moving selected workloads to AWS in later years. Progressed from individual contributor to technical lead over 7+ years, establishing the foundation for later international leadership roles.

EDUCATION

Computer Science Degree — SAFA-ICET, Málaga, Spain

CERTIFICATIONS

- AWS Certified Solutions Architect — Professional
- AWS Certified Machine Learning — Specialty
- AWS Certified Security — Specialty

LANGUAGES

Spanish — Native · English — Proficiency · French — Intermediate
